About CLPT IPR cell

Chalapathi Institute of Pharmaceutical Sciences formed Intellectual Property Rights Cell (CLPTIPR Cell) on 18 December 2018 with a vision to develop human resource in the management of Intellectual Property Rights as an integral part of the innovation process and the innovation value chain in the college.

Several patents have been filed based on the innovations done in CLPT. The cell has been involved in several IPR awareness and implementation programmes in the college campus. The cell is gradually building IPR consciousness in the region, not only within the institution but also among the different strata in the society.

A key objective of this cell is to integrate IPR with the education process to enhance the quality of thinking, propagate a culture of regard and respect for IPR, ensure speedy and accurate identification and protection of innovations arising out of the research work carried out in the college, facilitate transfer of knowledge and technology from the college to industry and enhance the scope of their commercialization.

Mission of the Cell

The CLPT Intellectual Property Rights Cell (CLPT IPR Cell) aims to evolve into a centre of excellence in the fields related to IPR education, innovation management integrated with IPR within an educational framework, protection of traditional knowledge and practices for socio-economic development and contributing to the development and implementation of IPR policy in the regional and national context.

Vision of the Cell

To become a centre for the creation of human resources in the field of Intellectual Property Rights (IPR) and to establish systems for seamless integration of IPR in the knowledge value chain in an evolving college framework.

Objectives

1. The primary objective of the interdisciplinary choice based on introductory of skill development programs at the UG and PG levels is to create IPR literates by exposing students to operational concepts in IPR.
2. The linked object is to give the students an opportunity to apply the concepts they learnt to their own research problems and plan their respective research strategies to avoid “rediscovering the wheel” and at the same time initiate the protection of the Intellectual Property created during their research to aid in speedy transfer to application centers/ industries for commercialization.

Outcomes

1. The programmes at the UG and PG levels will sensitise the students to issues of intellectual property rights in an academic system so that they imbibe ethical practices at an early phase of their lives, which in the longer run get deeply embedded as good practices, as they step into their professional trajectories.
2. Researchers with skills in landscaping of technologies based on comprehensive literature searches that include accessing and analysing patent literature and using the same for focused definition of their research problems and working out patent non-infringing solutions to their research problems thereby enhancing the quality of research output and targeting them for possible commercialisation.
3. A platform with sound foundation for the development of smart human resource with appropriate training to explore new careers in IPR, management of innovation, enhanced employability and entrepreneurs from within the college system.

Functions of the Cell

1. IPR cell shall guide and help the faculty members and students of Chalapathi Institute of Pharmaceutical Sciences in patentability assessment and to apply for various IPRs such as Inventions, Designs, Trademarks and other creative works.
2. The faculty members desirous of filing a patent or for any other IPR application would given the necessary advice and guidance by the IPR Cell.
3. An internal approval form (available at IPR Cell) filled by principal investigator (PI) where in the name of the Inventor/Authors shall be mentioned, is to be signed by the PI and he/she has to get approval from the Chairman of IPR Cell.

4. Invention disclosure description (In invention disclosure format) is to be forwarded along with the duly signed approval form to the IPR cell for further action.
5. Invention disclosure Patent/Trademark and similar documents are to be treated as confidential and would be maintained confidentially by the signing of a Non-Disclosure agreement by the IPR cell.
6. All the expenses for filing patents will be paid by the college. However, as the patenting is expensive, efforts should be made to get the patent filed through other funding agencies.
7. The IPR cell shall help the inventor in drafting the patent application/ or any other IPR application and filling of relevant forms.
8. The draft application along with the relevant forms shall then be forwarded to the concerned agency/authority by the IPR cell.
9. The IPR cell shall correspond with the authority/agency and the inventors on IP matters.
10. The inventors would be required to cooperate with the IPR cell to expedite furnishing of information for timely actions since delay would mean payment of extra fee to the patent office.
11. Any work sought to be filed by a faculty member or student(s) arising out of R&D work done at the College will be filed in joint names as inventors or authors while college shall be the applicant and owner of Intellectual Property (IP).
12. After filing of the application for IP protection, the inventors shall inform to the IPR cell of any further development, if any, in the related R&D work.
13. The IPR cell and inventors in collaboration with Research Advisory Committee shall work together for commercialization of the newly created knowledge.
14. Revenue sharing: The college and inventors/researchers, all share in the revenue earned from the licensing of patents for their inventions.
15. The cell also holds the responsibility to conduct the *Internal audits* in college for all departments for the purpose of supporting the Quality management and Quality enhancement in all aspects.
16. These guidelines do not constitute legal advice. In case of any legal problem, an intellectual property lawyer may be consulted.
